

AVIGILON WORKSTATIONS

HIGH-PERFORMANCE SUPPORT FOR YOUR SECURITY SYSTEMS

The Avigilon Workstation offers a simple and easy way to bring high-resolution monitoring to new and existing systems. Customers can achieve superior video playback, more efficient recording and reliability with increased performance across new Remote Monitoring Workstations and NVR5 Workstations, which are now equipped with upgraded 12th-generation Intel processors. Avigilon Workstations are available in two forms.

The seventh-generation Remote Monitoring Workstations are used to watch the video for a cluster of Network Video Recorders (NVRs) or appliances at a site, whereas the NVR5 Workstation is a combined recorder and client workstation that serves as a simple and easy way to implement additional high-resolution monitoring stations to existing systems

AVAILABLE IN TWO FORM FACTORS:

- Remote Monitoring Workstation (7th Generation)
- NVR5 Workstation

FEATURES

TESTED PERFORMANCE

The Avigilon Workstation lineup has been stress tested through various component combinations for the highest performance for Avigilon Unity workloads.

EASY RECOVERY

A purpose-built and turnkey solution that is simple and secure for Security and IT teams to deploy.

ALL-IN-ONE SOLUTION

The NVR5 Workstation delivers an all-in-one solution for small to medium sites that need local recording and playback.

SMALL FORM FACTOR

Its streamlined size and design reduce hardware footprint for space-constrained areas while still serving as an all-in-one workstation that is able to record and monitor video.
