

H4 Video Intercom

Technology Preview

The H4 Video Intercom integrates a 3 MP camera with a high-performance intercom and features exceptional wide dynamic range, low-light, noise reduction and echo-cancelling technologies for clear viewing and two-way communication with visitors. Combined with Avigilon Control Center (ACC) video management software, this secured entry system enables operators to quickly and easily identify and communicate with a visitor before remotely granting access.

The Front Line of Security

The H4 Video Intercom serves as a first line of defense for facilities where securing main entry points is critical. It can help schools verify campus access; it can provide parking entry to approved guests at hotels; and it can offer after-hours entry to retail staff. By providing and restricting access, the H4 Video Intercom helps enhance security while also maintaining convenience.

KEY FEATURES

3 MP fisheye lens

Wide Dynamic Range, LightCatcher™ and adaptive IR technologies

Bi-directional communication

Remote entry control

Surface and optional flush mount models available

BENEFITS

Wide-angle H4 platform camera technology offers extended field of view to clearly capture individuals of different heights on video.

Provides clear image detail in a broad range of challenging entrance lighting conditions, including nighttime.

Noise reduction and echo-cancelling allow clear two-way communication.

Using ACC™ software, operators can receive, review, and respond to intercom requests and grant access to authorized individuals.

Vandal- and tamper-resistant stainless steel housing offers reliable strength and durability.
