

Deep dive into XProtect Express+

Help low-to-mid-market customers do more with their video

In addition to the features included in XProtect Express, XProtect Express+ offers:

Access to the latest technology:

XProtect Express+ includes support for H.265 video compression and hardware accelerated video motion detection (VMD), which opens the door for using the latest 4K and UHD cameras and lowering the total system cost.

Quick incident response with full alarm management capabilities:

Customers get a full overview of the alarms that have been triggered in their installation and can manage them in an effective manner.

Efficient investigations:

The advanced video search tool called "Smart Search", available in the XProtect Smart Client, bases its search results on metadata. Metadata is generated during video motion detection which results in an extremely fast way of finding video sequences of interest.

Improved overview with interactive maps:

Customers can use the multi-layer maps to identify the precise location of incidents and pull up all relevant cameras and devices in the installation.

How do the products compare?

Product features	XProtect Express	XProtect Express+
Type of deployment	Single server	Single server
