XProtect
Professional+

Unrestricted number of cameras

Unrestricted number of users

Deep dive into XProtect Professional+

Bringing world-class performance to the mid-market

In addition to the features you know from the current XProtect Professional product, XProtect Professional+ offers the following:

Take advantage of the latest technology:

XProtect Professional+ includes support for H.265 video compression and hardware accelerated decoding video motion detection (VMD), which opens the door for using the latest 4K and UHD cameras and lowering the total system cost.

Centralized management:

For customers with multiple sites and/or servers, XProtect Professional+ enables operators to monitor, manage and operate all connected cameras and sites from one central interface.

Make the most of Edge Storage:

XProtect Professional+ includes support for Edge Storage, either as a way of reducing the on-site storage requirements, and thus the installation cost, or to take advantage of recording redundancy during system failures and maintenance downtime.

Do more with support for metadata:

Customers integrating third-party solutions via the MIP SDK can take advantage of the metadata support that enables users to integrate any data source into the video system and link it with video.

Endless scaling:

In addition to supporting an unrestricted number of cameras and concurrent users, XProtect Professional+ also supports an unrestricted number of cameras per recording servers, making it easy for customers to scale their installation over time.

How do the products compare?

Product features	XProtect **Professional**	XProtect **Professional+**
Type of deployment	Multi server	Multi server
Number of recording servers per system	Unrestricted	Unrestricted
Number of devices per recording server	320	Unrestricted
Maximum number of users	Unrestricted	Unrestricted
