READER

Use Video Reader Pro with On-Premise Access Control

Video Reader Pro seamlessly integrates with legacy access control systems, including **Access Control Manager (ACM)**, via its Standalone Mode. With this mode, enterprise-class installations with an on-premise access control system can now benefit from a modern and powerful multi-technology reader without needing an additional license or subscription. Video Reader Pro captures video footage right at the door and directly sends it to video management software, including Avigilon Control Center (ACC).

Integration features

- Subscription-free*
- Turnkey installation and easily scalable
- On-premise access solution compatibility, including ACM
- Send credential data to third-party access control systems
- Low- and high-frequency (CSN only) cards and fobs support
- Add video footage with the reader's advanced built-in 5MP camera
- Send ONVIF video footage to video management software, including ACC

How does it work?

Wiegand wiring connection required to the third-party access control system

Internet connection only needed for the initial set-up

Easy installation with an Ethernet cable

*Standalone Mode is available to all new customers and those who onboarded after 2/22.
